

# Image-Search-App

This image search application allows users to search for images using the Unsplash API. When a user enters a query and clicks the search button, the application fetches images related to the query and displays them on the page. Users can also load more images by clicking the "Show more" button.

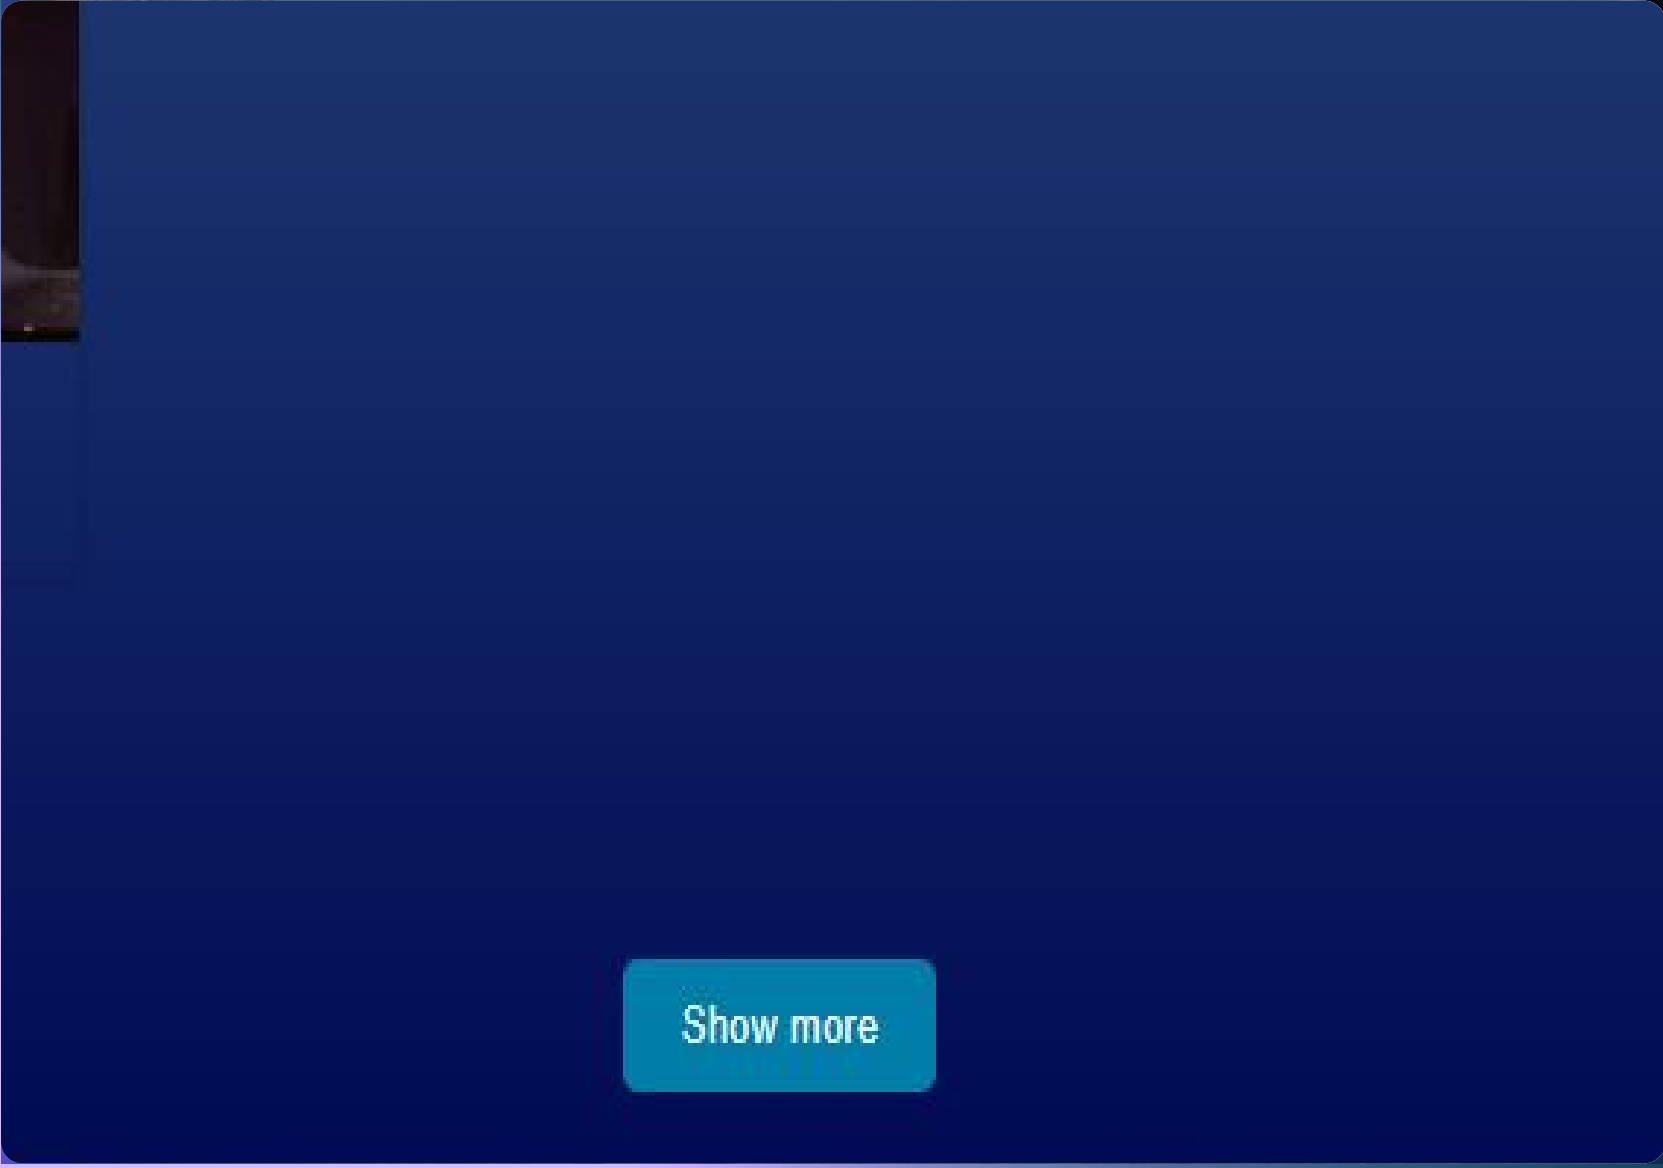

## ## Features

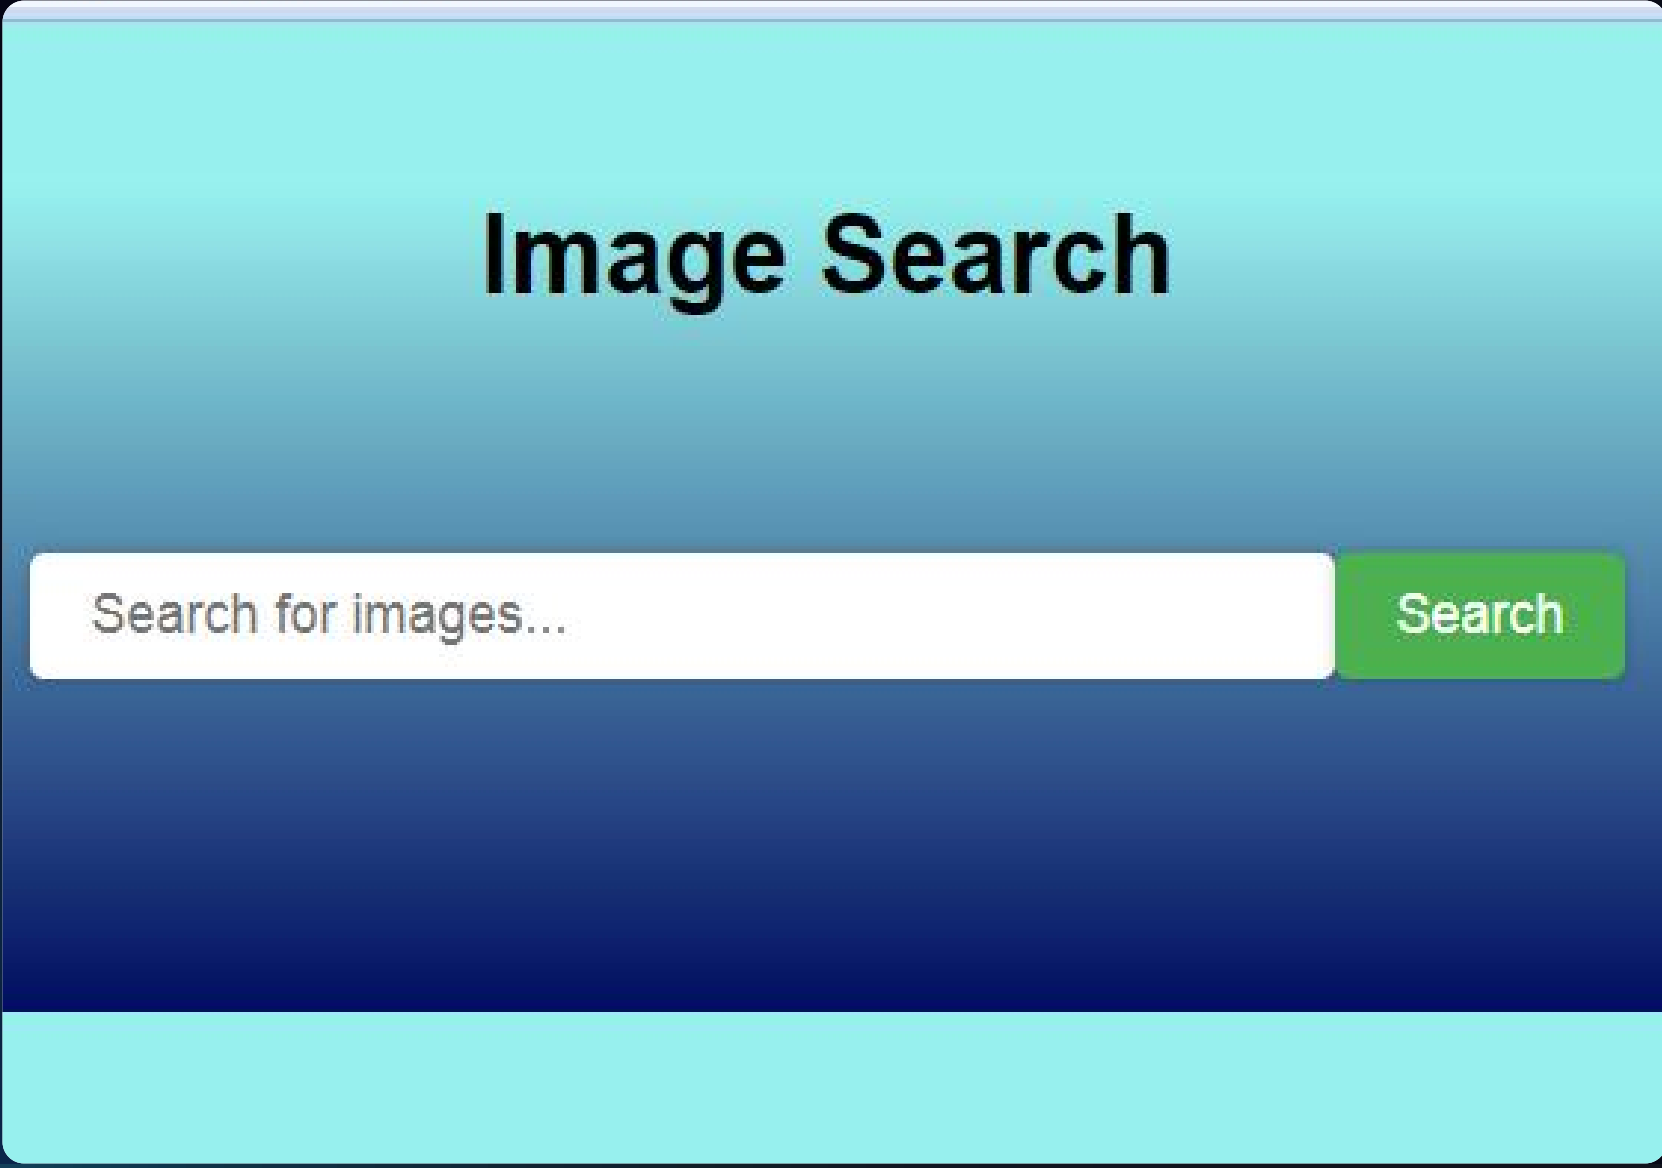

- Search Functionality: Users can input a search term to find relevant images.
- Dynamic Results: The application displays the search results with images and links to the original source.
- Load More Results: Users can click on a "Show more" button to load additional search results.

## ## How It Works

- Search Input: Users type a search term into the input field.
- Search Button: Users click the "Search" button to initiate the search.
- Displaying Results: The search results are displayed dynamically below the search form, including images and links to the original sources.
- Show More Button: Clicking the "Show more" button loads additional images, enhancing the search experience.

## Files Included

index.HTML: The main HTML file containing the structure of the application.  
style.css: The CSS file for styling the application.  
index.js: The JavaScript file handling the search logic and dynamic content rendering.  
Installation and Usage

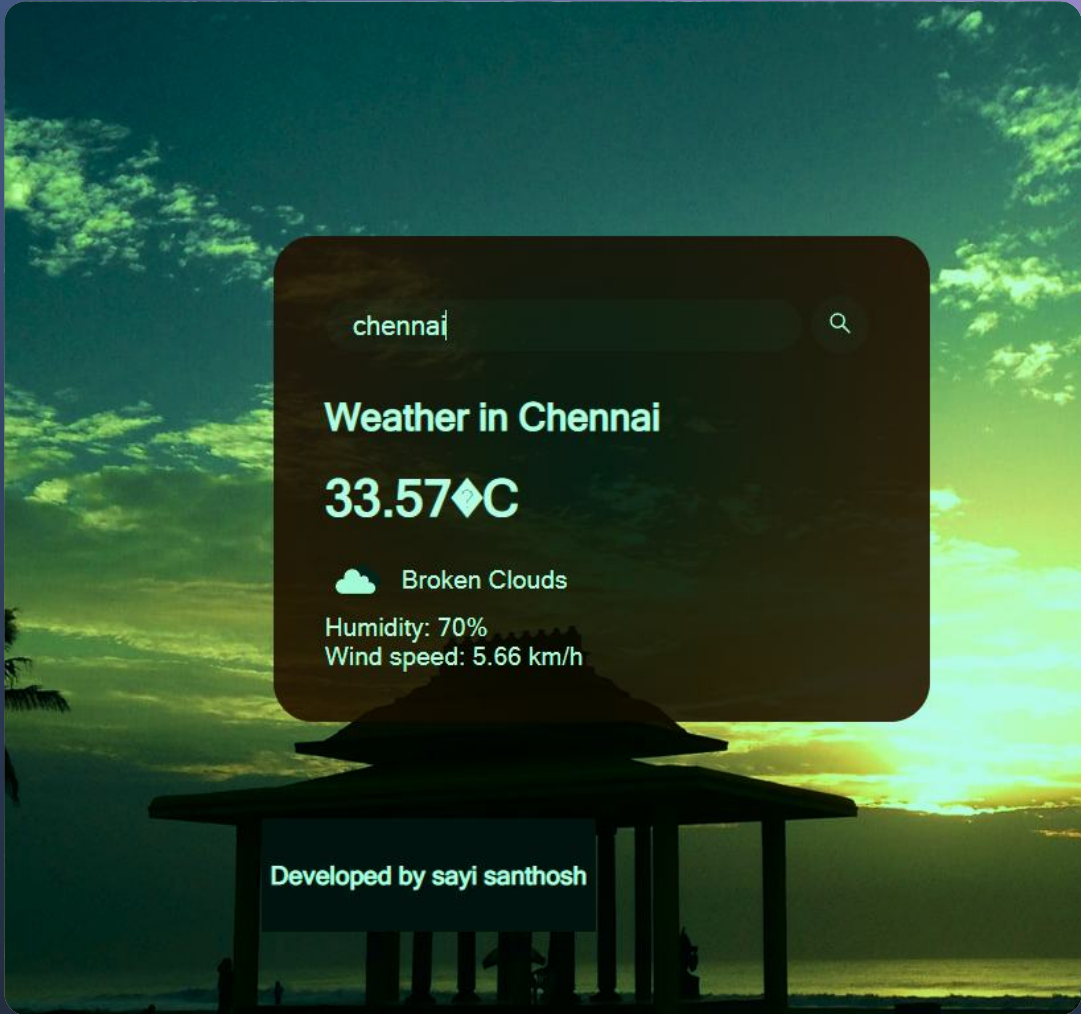

## " Bash "

Copy code  
git clone https://github.com/sayisantosh/image-search-Web-app.git  
cd image-search-Web-app  
Open the Application:  
Open the index.html file in a web browser to use the application.
